Customized Communication Services

For many years, the marketing industry has effectively used powerful audiovisual media to communicate and influence the behavior of their mass target audiences in every which way they can imagine. Nonetheless, most companies and business owners alike have been unable to adopt and implement similarly persuasive communication strategies with their most valued and accessible of audiences: their employees, customers and partners. In the process, numerous daily opportunities of reinforcing desired behavior are left unused, or worst yet, left to informal and uncontrolled channels that do not consider your business success as their primary objective. With that in mind, every business can identify and effectively exploit their captive audiences with potent customized audiovisual communications to elicit many desired behaviors such as efficiency, increased purchasing, increase sales and error reduction.

The New Face of Powerful Communications

Using proven methodologies and technologies, In-House Media partners with companies to define and deliver an innovative customized communications service they subscribe to that reaches their captive audience of interest, and conveys a strong message with a specific purpose.

The final result of the effort is the deployment of smart displays near where the target captive audience can be reached delivering directed audiovisual content that can be manipulated remotely from a central location as part of the service. This network of displays essentially provides a business with their own communications channel.

Our proprietary centralized administration system allows us to efficiently manage your smart displays remotely.

Smart Display

A computer accessible in a Local or Wide Area Network or the Internet, running the In-House Media Player and In-House Media Communication software turns any connected video display of any kind or size (regular TV, Plasma TV, CRT Monitor, etc.) into a smart display that can be remotely controlled to del i ver customi zed content to specified audiences at specified times.

In-House Media Player

It is the piece of software that makes the connected display or displays intelligent. It can automatically play customized rich audiovisual content in many formats, and supports scheduling of content for reaching different target audi ences.

In-House Media Communication Software

In-House Media utilizes the Internet as the communications backbone between the intelligent displays and our media management and control center. The service supports a number of different ways to connect the displays to the internet using direct connections, or leveraging your existing Local or Wide Area Network. Software at both ends of the connection handles all the details of exchanging required information between them.

Centralized In-House Media Administration System

Using proprietary technology at the control center, In-House Media manages individual customer's content, intelligent displays, media lineups and schedules and statistics.
